EDUCATION

G M University, Davangere | B.Tech in Computer Science & Engineering - Information Security

Expected May 2028

PROFESSIONAL SUMMARY

Computer Science and Information Security student with hands-on experience in cybersecurity, network security, privacy engineering, and AI-assisted security applications. Built practical projects in property document verification, healthcare data privacy, network routing analysis, cryptography, authentication, and security labs using Python, Streamlit, GNS3, Wireshark and web technologies.

TECHNICAL SKILLS

Cybersecurity: Network Security, Information Assurance, Vulnerability Assessment, Security Monitoring, Packet Analysis, Authentication, Access Control, Cryptography, Data Privacy

Networking: TCP/IP, IP Routing, Longest Prefix Match, Subnetting, Network Topology, Ping, Traceroute, Wireshark, GNS3, Cisco IOS

Programming: Python, Java, JavaScript, C/C++, SQL

AI/ML & Data: Pandas, NumPy, Scikit-learn, NLTK, KNN, Decision Trees, K-Means, PCA, Streamlit

Development & Tools: FastAPI, React, HTML5, CSS3, REST APIs, MongoDB, MySQL, Git, GitHub, VirtualBox, Linux, OpenAI API

CYBERSECURITY PROJECTS

AI-Driven Property Security Verification System | Python | AI/ML | Document Analysis | [GitHub](#)

- **Developed** an AI-assisted property document verification workflow to extract ownership, extent, encumbrance and related details from heterogeneous documents and cross-verify records.
- **Implemented** mismatch, missing-information and risk-indicator detection with severity-based reporting to support property due diligence for buyers, lawyers, builders and financial institutions.

Healthcare Data Privacy Analyzer | Python | Pandas | Streamlit | [GitHub](#)

- **Built** a privacy-preserving microdata analysis tool to classify attributes, assess re-identification risk and evaluate protected healthcare data before release.
- **Implemented** suppression, generalization and data swapping with privacy-improvement and information-loss analysis, plus protected-dataset export.

Information Assurance Lab | Python | Cryptography | Authentication | [GitHub](#)

- **Implemented** security labs covering password-strength analysis, risk assessment, Caesar cipher, SHA-256 hashing and role-based access control (RBAC).
- **Documented** security controls and working demonstrations to reinforce authentication, cryptographic protection and information-assurance concepts.

Longest Prefix Match - Network Demonstration | GNS3 | Cisco IOS | Wireshark | VirtualBox | [GitHub](#)

- **Configured** overlapping /12, /16, /24 and /25 routes in a virtualized topology to demonstrate deterministic route selection by prefix specificity.
- **Validated** routing behavior with ping/traceroute and packet-level analysis in Wireshark across the configured topology.
